### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 896 043. EP '043 discloses compositions for dental use comprising photopolymerization initiators that can be used singly or as mixtures. Photoinitiators disclosed comprise an alpha-diketone and tertiary amine, wherein the amines can be used singly or in combinations, aryl borates and photacid generator, See paragraphs [0071], [0072], [0078] and [0080]. Halomethyl group-substituted s-triazine derivatives are taught as being useful photoacid generators. The examples disclose combinations of camphorquinone with mixtures of amines. It would have been obvious to one skilled in the art at the time of the invention to employ a mixture of the photoinitiators disclosed by EP '043. One of ordinary skill in the art at the time of the invention would have been motivated by a reasonable expectation of providing effective photoinitiation for a polymerizable composition, as taught by EP '043. EP '043 teaches photoinitiators corresponding to the photoinitiators set forth in the instant claims and that mixtures of the photoinitiators can be used. It would have been obvious to one skilled in the art at the time of the invention to select an alpha-diketone, such as camphorquinone, in combination with a mixture of an aromatic amine and an aliphatic amine, as shown in the examples of EP '043. It would have been obvious to one skilled in the art at the time of the invention to include a halomethyl group-substituted s-triazine derivatives photoacid generator in order to take advantage of the acid generated for curing the compositions, as taught by EP '043.
